

## Maintenance and cleaning instruction for Moeding ALPHATON and Moeding LONGOTON Terracotta facade

- In principle Moeding Alphonon and Moeding Longoton facades are maintenance free. In normal cases it is not necessary to clean the installed facade
  - The terracotta tiles will be delivered in a clean condition. If the installation is done properly, the tiles will not get a contamination during installation.
- Site cuts
  - Tiles which will be cut at site during construction have to be cleaned with water after cutting (before installation).
- Light stain
  - In case of light stain (dust etc.) we recommend to clean the facade using clear cold water and maybe a high quality brush. Water pressure should be max. 3 bar to protect the thermal insulation.
- Intense stain
  - In case the façade is affected by intense stain, cleaning should be done by a competent cleaning company. This company should first check at site how the stain can be removed. As such stain can have various reasons we can not give a general guideline how to clean.

We can not give any warranty on cleaning procedures
